Decrease in High Levels of Heavy Metals Reported when Treating with NDF™.

Los Angeles, CA- (5/1/04), Using DMPS as the provocation agent for pre- and post-urine challenge, the following laboratory results were observed: Female patient, 43 years, began using NDF™ as her heavy metal detox chelator. Previously she had been receiving 2 DMPS IVs per month, ingesting DMSA 3x per week, and had ingested 6 bottles of Metal Free over a one-year period with no change in her Doctors Data Lab report. Patient started on NDF at 6 drops, 2x per day, ramping up the dose to her top tolerated dose of 2 mls (52 drops), 2x per day. The reports below show her success in lowering her heavy metal loads over a seven-month period with no side effects.

Baseline DMPS Challenge from Doctors Data shows:

Mercury	140	< 3	
Bismuth	84	< 30	
Arsenic	72	<100	

Follow up DMPS Challenge from Doctors Data shows patient's decrease in Heavy Metal load:

Mercury	26	<3	
Bismuth	<DL	< 30	
Arsenic	56	<100	

Patient reports: "I have an increase in energy and mental function that I haven't experienced in over 20 years - no more 'foggy brain'; migraines and dizziness are gone. Uncomfortable GI symptoms have decreased dramatically. NDF™ works.

It's safe and cost effective compared to what I went through with DMPS, DMSA, and Metal Free."

Complete versions of the labs summarized here are available at: www.bioray2000.com.

"NDF provides safety and effectiveness for my patients. From young to elderly patients, all have reduced their toxic load significantly and experienced no side effects during their detox protocol."
